

Installing Eclipse to Your Desktop Tutorial

1. Go to the [Oracle website](#) to download a Java Development Kit (JDK).
2. Download Java SE Development Kit 12.0.2.
3. You will need to **accept** the license agreement and select the appropriate product for the download. Select the **Windows** version and **EXE file folder** to download.

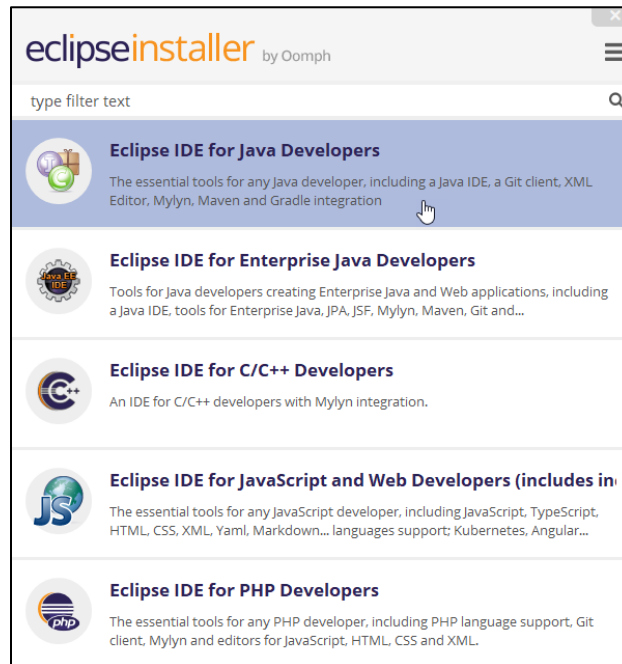

4. Navigate to your **Downloads** folder. You should see the application for the JDK.
5. You can move the application from your Downloads folder to your Desktop.
6. Next, go to the [Eclipse Installer](#) and follow the instructions.
7. Click **Windows 64 bit** on the right-hand side of the first box under “Download.” Then click **Download**.

8. Once the application downloads to your computer, you will see it in a browser bar with an arrow. Click the arrow and select **Open**.
9. You can move the application from your Downloads folder to your Desktop.

10. Open Eclipse and select **Eclipse IDE for Java Developers**.

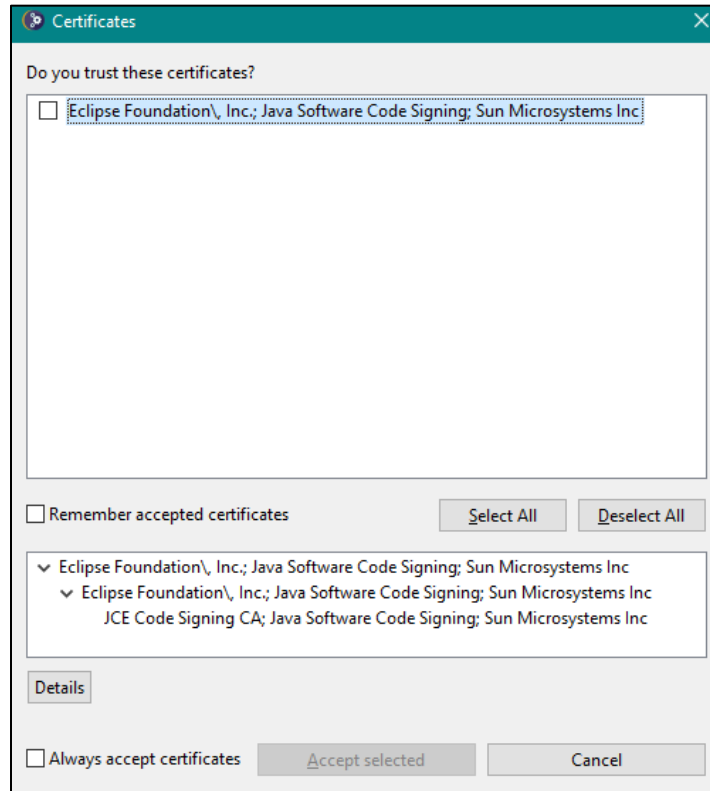

11. **Install** the Eclipse IDE.

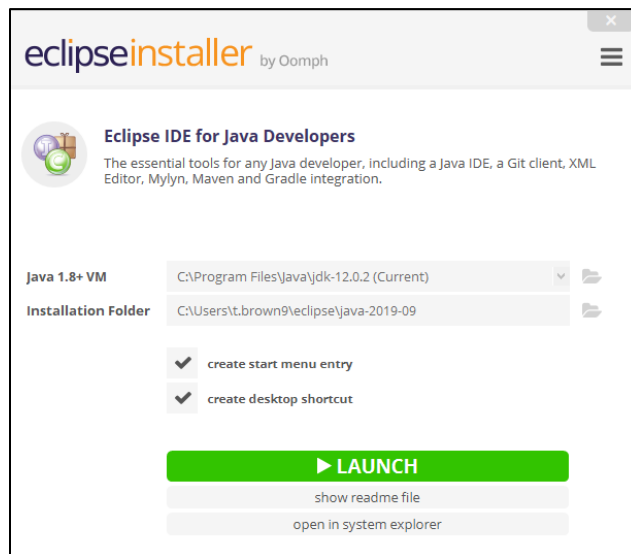

12. **Accept** the Software User Agreement and licenses to continue the installation.

13. When prompted about Certificates, check the **Eclipse** box and click **Accept selected**.

14. Click **Launch** to begin using Eclipse.

15. Select a directory as workspace and click **Launch**. This will open the Eclipse IDE.
